

AMENDMENTS TO THE WRITTEN DESCRIPTION

Please enter the following new abstract:

ABSTRACT OF THE DISCLOSURE

Processing digital material, including program code and data, includes running the program code on a computing device until a predetermined execution point is reached. An execution state exists at the execution point. The method also includes forming a combined representation of the execution state, data and program code at that execution point, the data, code and execution state being restorable from the representation so that execution of the material may subsequently be resumed from the execution point on a remote computing device. Preferably, prior to the execution point, customization information is provided whereby the representation is customized by the information. Particular applications for the sale of video and audio files on demand are disclosed.
